# Product Description

## The ODU MINI-SNAP family of Miniature Cylindrical Connectors features Push-Pull-Locking

Cylindrical Connectors are generally available with several locking mechanisms.

**The most frequently used are:**

- Threaded-Locking Sleeve
- Bayonet-Locking
- Push-Pull-Locking

### **Push-Pull-Connectors have a very simple locking mechanism:**

- As the plug is pushed into the receptacle, locking fingers on the plug snap into the receptacle creating a reliable connection between plug and receptacle.
- Pulling on the cable or the rear of plug causes the locking fingers to grab harder and a separation of plug and receptacle is almost impossible. Pulling on the outer plug housing causes the locking fingers to retract and the plug and receptacle separate easily.

### **The Advantages of Push-Pull-Connectors:**

- Quick and easy mating and demating
- Quick and easy separating
- Easy blind mating in difficult-to-reach places
- Less panel space required
- Definite and secure locking condition
- Less mating required
- Robotic mating and demating possible
- Easy cleaning of housing possible

### **Important Applications for Push-Pull Connectors:**

- Medical Electronics
- Test and Laboratory
- Measurement Instrumentation
- Data and Telecom Systems
- Audio and Video Applications
- Military and Aerospace
- Industrial Controls
- Nuclear Technology

# Applications

Medical

Consumer electronics

Test and Measurement

Telecommunication

Industrial and Automation

## Important Issues At A Glance:

- The series is certified acc. **UL** and VDE.
- **Connector with metal shells available in 8 sizes**  
 Outside diameter between 6.5 mm and 42 mm  
 Number of contact positions: 1 to 40 position, mixed insert arrangements.
- **Plugs and inline receptacles** are offered with solder and crimp termination.  
**Receptacles** are available for solder, crimp, and PCB termination.

- **Applications**

	Insulation Body Material PBT	Material PEEK	Contact Material Ms
General Application requirements (-40 °C +120 °C)	●	●	●
Connectors which, are autoclavable (+134 °C, see page 130)		●	●

- **Termination Style**

- Crimp Termination		●
- Solder Termination	●	●
- Printed Circuit Board (PCB) Termination	●	●

- **Environmental Protection Classification**

IP 50 and IP 68 are available

**➔ What we don't have yet, we can build for you!**

## Turned contact

Turned contacts are available in the diameters 0.5 to 4.0 mm.

The contacts are available with following terminations:

- Solder
- Crimp
- Print

### Standard Pin Contacts

Mating cycles:	> 5,000
Material:	Brass
Treatment processing:	At least. 1.25 $\mu\text{m}$ Ni; at least. 0.75 $\mu\text{m}$ Au on the mating area

**For information regarding diameter, termination style and current load please see the Contact Configuration section.**

Standard Back Nut

0

Back Nut for Silicon Cable Bend Reliefs

S

Series L

Cable Bend Reliefs on page 104

# ODU MINI-SNAP

## Series K – IP 68

LP-Locking Concept

Keying with Pin and Groove

## The Push-Pull Locking Principle: LP

Pulling on the cable or on the back nut causes the "jaws" to grip harder into the groove in the receptacle. A separation is virtually impossible.

Pulling on the outer plug housing disengages the "jaws" from the receptacle groove and the connector separates easily.

# ODU MINI-SNAP

with LP-Locking Scheme in Cross Section

Series K

## Available Housing Sizes

# ODU MINI-SNAP

## Series B – IP68

FP-Locking Concept

Keying with Pin and Groove

## The Push-Pull Locking Principle: FP

ODU MINI-SNAP connector in **unmated** condition.

Receptacle

Plug

ODU MINI-SNAP connector in **mated** condition.

Pulling on the cable or on the back nut causes the locking fingers to grip tighter into the groove inside the receptacle. A separation is virtually impossible.

Pulling on the outer plug housing disengages the locking fingers from the receptacle groove and the connector separates easily.

<b>without cable bend relief</b>	

# Inserts Series L, K, B

PCB and solder contacts are factory-installed in the insulation body.

Crimp contacts are shipped separately

## Insulation Body Material

# Special Solutions

## Customer specific solutions for ODU MINI-SNAP

ODU as a specialist for customized solutions have all main competences under one roof.

Development, an own tool shop, stamping, molding, surface plating, manufacturing of complete assembly machines etc.

With all these possibilities we are able to offer "custom tailored" solutions for our customers.

### When do we actively pursue customer specific solutions?

First we have to study the customers requirements. In order to use existing development resources efficiently, it is necessary to concentrate on those ideas that are very likely to produce sustained earnings. And so we work very closely with you to develop exactly the product that optimally fulfills the requirements. And naturally the feasibility is analyzed in the starting phase of every development in order to make it possible to estimate the costs for a new development.

### Here are a few examples how a special solution may look like:

**Custom Specific Inserts**

**Special insulators and special assemblies for High-Voltage applications**

**Custom specific PCB assembling**

**Different types of surface plating**

**Special overmouldings and insulation sleeves**

**Also different locking mechanism are possible (picture: Bajonett and Threaded Locking)**

# Tools

## Crimping Tools

### 8-point-crimptong

**Order-Nr.: 080.000.037.000.000**

for crimp contacts: 0.7 mm and 0.9 mm.  
cross section: 0.08 mm<sup>2</sup> up to 0.5 mm<sup>2</sup>

You can find all informations about adjustment and using of this tools on page 109

### 8-point-crimptong

**Order-Nr.: 080.000.038.000.000**

for crimp contacts: 1.3 mm and 1.6 mm.  
for cross section: 0.38 mm<sup>2</sup> up to 2.5 mm<sup>2</sup>

You can find all informations about adjustment and using of this tools on page 109

### Pneumatic crimping tool

**Order-Nr.: 080.000.032.000.000**

For all MINI-SNAP contacts applicable  
cross section: 0.08 mm<sup>2</sup> up to 2.5 mm<sup>2</sup>

The Crimp information does only apply for Crimp-Clip-Contacts!

**Order example for the tongs type 037 and 038:**

Assumed Connector: S12LOC-T08PJH0-7200

In this size 2 connector is a 8-way Pin Insert used.

The contact diameter is 0.9 mm.  
The cable cross section is AWG 20/22

Therefore you have to order following tools:

**080.000.037.000.000 Crimp Tong 037 (Adjustment 7)**  
**081.702.001.849.037 Positionier for Pin Contacts**  
**085.180.689.000.000 Removal tool**  
**702.098.004.300.000 Assembly Jig**

You can find all informations about adjustment and using of this tools on page 110.

**Adjustment of the Crimp Tongs 080.000.037.000.000 and 080.000.038.000.000**  
(see page 109)

**1. Fasten the Positionier on the Crimp Tong**

Please fasten the Positionier under consideration of the guiding into the tong

037: Thereby push the positionier down and turn it right at the same time.

038: You don't have to do this with this tong.

037: To fix the positionier in this position, you have to use the attached safety pin.

038: Here you have to fix the positionier with some attached allen screw and the suitable spanner.

**2. Adjust of the Crimp Tong for the cable cross section**

Please turn the adjustment wheel onto the right position. If the adjustment is done, so please fix the wheel with the attached safety pin.

Now the tong is ready adjusted. You can start with the crimp process

### Spanner Wrench

702 098 001 000 000	M 18x1
703 098 001 000 000	M 20x1

suitable for style 3 / Series K

Nutdriver	Thread
701 098 002 000 000	M 14x1
721 098 001 000 000	M 16x1
703 098 001 000 000	M 20x1
724 098 001 000 000	M 30x1

## Removal tool for Crimp-Clip-Contacts

Part-Number	Contact Ø
087 7CC 050 001 000	0.5 mm
087 7CC 070 001 000	0.7 mm
087 7CC 090 001 000	0.9 mm
087 7CC 130 001 000	1.3 mm
087 7CC 160 001 000	1.6 mm

Crimp-Clip-Contact

## Assembly tool series K

**Order-Nr.: 080.000.055.000.000**

- Useable from Size 0 until 4
- To clamp the inner housing for back nut assembly
- Incl. jaws for bench vise fixing for easy handling

# Assembly Instructions

# Assembly Instruction

## For unsealed Connectors Series L (IP 50)

1. Slide Back nut and Collet over the cable.

2. Strip cable and wire  
3. Pre-tinning of strands recommended

4. Solder each wire to the corresponding contact

5. Bend cable shield outwards, assemble half shells.

6. Slide the EMI-Ring against the sleeve and clamp the shield between it.

7. Now you can put the assembled cable into the plug-housing. If needed, secure thread (A) with locking glue.

8. Screw back nut on the plug, hold against flat 1 and fasten cable in the housing\*.

**Attention!** Torque value:

Size	00	0	1	2	3	4
Nm	0.5	0.6	1.0	2.0	3.5	4

Now the plug is assembled.

\* ODU-Spanner-Wrench: see page 111

# Assembly Instruction

## For unsealed right-angle plug connectors (IP 50), series L

1. Slide back nut, collet, right-angled-part and sleeve over the cable.

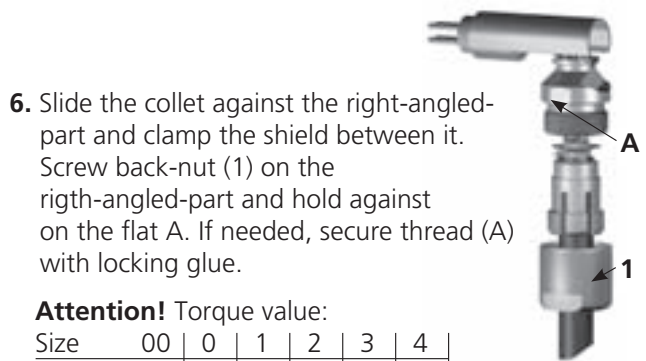

2. Strip cable and wire  
3. Pre-tinning of strands recommended

4. Solder each wire to the corresponding contact (Crimp version see straight Connector to Page 118)

5. Pull cable back and bend 90° down. Spread the cable shield over collet ring. Slide sleeve over insulator.

6. Slide the collet against the right-angled-part and clamp the shield between it. Screw back-nut (1) on the righth-angled-part and hold against on the flat A. If needed, secure thread (A) with locking glue.

**Attention!** Torque value:

Size	00	0	1	2	3	4
Nm	0.5	0.6	1.0	2.0	3.5	8

7. Now you can put the assembled cable into the plug-housing.

8. Mount back-screw (2) on the plug and fasten cable in the housing \*. If needed, secure thread with locking glue.

**Attention!** Torque value:

Size	00	0	1	2	3	4
Nm	0.2	0.3	0.4	0.9	1.3	2.0

Now the plug is assembled.

\* ODU-Spanner-Wrench: see page 111

# Assembly Instruction

## For sealed connectors (IP 68) Series K

1. Slide Back nut, Collet, Seal Ring and EMI-Ring over the cable.

### Crimp termination

Detail information see page 108-109

Part number see page 108

2. Strip cable and wire
3. Fit wire into the contact barrel and crimp

Part number see page 109

4. Insert contacts into insulator, use the insertion tool to push them in

Half shells

### Solder termination

2. Strip cable and wire
3. Pre-tinning of strands recommended

Solder iron

4. Solder each wire to the corresponding contact
5. Bend cable shield outwards, assemble half shells.
6. Slide the EMI-Ring against the sleeve and clamp the shield between it.
7. Now you can put the assembled cable into the plug-housing. If needed, secure thread (A) with locking glue.
8. Screw back nut on the plug and fasten cable in the housing. Tighten with ODU-Spanner-Wrench (B) and hold against with ODU tongs 080.000.055.000.000 (C).

**Attention!** Torque value:

Size	0	1	2	3	4
Nm	0.6	1.0	2.0	3.5	3.5

Now the plug is assembled.

\* ODU-Spanner-Wrench: see page 111

**Watertight connectors require a grommet seal designed for the intended cable. We require either the exact specification or a sample of the cable.**

# Assembly Instruction

## For sealed right-angle plug connectors (IP 68) Series K

1. Slide back nut, collet, seal ring, EMI-ring and right-angled-part over the cable.
2. Strip cable and wire
3. Pre-tinning of strands recommended

6. Slide collet, seal ring and EMI-ring against the right-angled-part and clamp the shield between EMI-ring and right-angled-part. Screw back-nut (1) on the right-angled-part and hold against on flat (A). Please halfshell over insulator. If needed, secure thread with locking glue.

**Attention!** Torque value:

Size	0	1	2	3
Nm	0.6	1.0	2.0	3.5

4. Solder each wire to the corresponding contact (Crimp version see straight Connector to Page 116)

7. Now you can put the assembled cable into the plug-housing.

5. Pull cable back. Spread the cable shield over collet ring.

8. Mount back-screw (2) on the plug and fasten cable in the housing. If needed, secure thread with locking glue.

**Attention!** Torque value:

Size	0	1	2	3
Nm	0.3	0.4	0.9	1.3

Now the plug is assembled.

\* ODU-Spanner-Wrench: see page 111

# Assembly Instruction

## For sealed connectors Series B (IP 68)

1. Slide Back nut, Collet, Seal Ring and EMI-Ring over the cable.

### Crimp termination

Detail information see page 108-109

Part number see page 108

2. Strip cable and wire
3. Fit wire into the contact barrel and crimp

Part number see page 109

4. Insert contacts into insulator, use the insertion tool to push them in

Half shells

### Solder termination

2. Strip cable and wire
3. Pre-tinning of strands recommended

4. Solder each wire to the corresponding contact

5. Bend cable shield outwards, assemble half shells.

6. Slide the EMI-Ring against the sleeve and clamp the shield between it.

7. Now you can put the assembled cable into the plug-housing. If needed, secure thread (A) with locking glue.

8. Screw back nut on the plug, hold against flat 1 and fasten cable in the housing\*.

**Attention!** Torque value:

Size	0	1	2	3
Nm	0.6	1.0	2.0	3.5

Now the plug is assembled.

\* ODU-Spanner-Wrench: see page 111

**Watertight connectors require a grommet seal designed for the intended cable. We require either the exact specification or a sample of the cable.**

# Assembly Instruction

## For sealed right-angle plug connectors (IP 68) Series B

1. Slide back nut, collet, seal ring, EMI-ring and right-angled-part over the cable.
2. Strip cable and wire
3. Pre-tinning of strands recommended

6. Slide collet, seal ring and EMI-ring against the right-angled-part and clamp the shield between EMI-ring and right-angled-part. Screw back-nut (1) on the right-angled-part and hold against on flat (A). Please halfshell over insulator. If needed, secure thread with locking glue.

**Attention!** Torque value:

Size	0	1	2	3
Nm	0.6	1.0	2.0	3.5

4. Solder each wire to the corresponding contact (Crimp version see straight Connector to Page 118)

Part No.700 412 106 000 000

7. Now you can put the assembled cable into the plug-housing.

5. Pull cable back. Spread the cable shield over collet ring.

8. Mount back-screw (2) on the plug and fasten cable in the housing. If needed, secure thread with locking glue.

**Attention!** Torque value:

Size	0	1	2	3
Nm	0.3	0.4	0.9	1.3

Now the plug is assembled.

\* ODU-Spanner-Wrench: see page 111

## Torque for back-nuts

### Torque for styles

- Straight plug S1; S2; S3; S4
- Right-angled-plug W1; W2; W3; W4
- Break-apart-plug A5; A6; A7; A8
- In-line-receptacle K1; K2; K3; K4
- Receptacle G6; G7

Size	00	0	1	2	3	4
Torque	0.5 Nm	0.6 Nm	1.0 Nm	2.0 Nm	3.5 Nm	4 Nm

1 Nm = 8.85 inch-pounds

## Cable Preparation:

The following Table provides recommended guidelines for cable preparation.

The according stripping measures have to be checked before assembly!

By the huge number of the different connectors partially the measures from the table mentioned below can differ.

A = Stripping length single conductor

L = Stripping length cable jacket

S = Stripping length braided shield

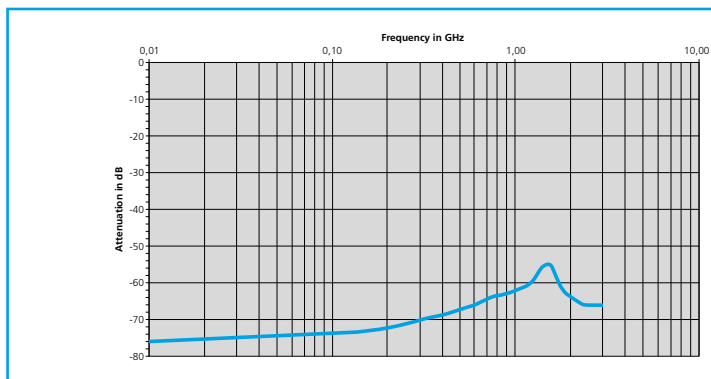

Size	Straight Plug						Right-angled Plug Series L						Right-angled Plug IP68 Series B						
	Solder Termination			Crimp Termination			Solder Termination			Crimp Termination			Solder Termination			Crimp Termination			
	L	A	S	L	A	S	L	A	S	L	A	S	L	A	S	L	A	S	
00	5	2	2	-	-	-	11	2	2	-	-	-	-	-	-	-	-	-	-

## International Protection (IP) Classes DIN EN 60 529 (respectively IEC 529 / VDE 0470 T1)

The housing and the locking system of the ODU MINI-SNAP protect the contacts against outside mechanical influence, such as impact shocks, impurities, dust, unintended contact and penetration of moisture, water or other liquids (coolants, oils, etc.).

Protection classification is indicated with the letters **IP** and two numbers.

IP: International Protection

**All IP 68 submersible ODU MINI-SNAP Connectors are rated to 2m water depth (0.2 bar) for 24 hours in accordance with DIN EN 60529.**

A watertight plug requires a cable grommet in the collet. The grommet has to fit tightly over the cable.

The cable jacket must be smooth, cylindrical and free of grooves.

The plug should be potted for watertightness in unmated condition.

(Higher requirements for Watertightness on request)

Code letters (International Protection)		First Index Figure (Foreign bodies protection)	Second Index Figure (Water protection)
<b>IP</b>		<b>6</b>	<b>8</b>
Index	Degree of protection	Index	Degree of protection
<b>0</b>	 No protection against accidental contact, no protection against intrusion of solid foreign bodies	<b>0</b>	No protection against water
<b>1</b>	 Protection against contact with any large area by hand and against large solid foreign bodies with $\varnothing > 50$ mm	<b>1</b>	 Protection against vertical water drips
<b>2</b>	 Protection against contact with the fingers, protection against large solid foreign bodies with $\varnothing > 12$ mm	<b>2</b>	 Protection against water drips (up to a 15° angle)
<b>3</b>	 Protection against tools, wires or similar objects with $\varnothing > 2.5$ mm. Protection, against small foreign solid bodies with $\varnothing > 2.5$ mm	<b>3</b>	 Protection against diagonal water drips (up to a 60° angle)
<b>4</b>	 As 3 however $\varnothing > 1$ mm	<b>4</b>	 Protection against splashed water from all directions
<b>5</b>	 Full protection against contact. Protection against interior detrimental dust deposition.	<b>5</b>	 Protection against water spray from all directions
<b>6</b>	 Total protection against contact. Protection against intrusion of dust	<b>6</b>	 Protection against temporary flooding
		<b>7</b>	 Protection against temporary immersion
		<b>8</b>	 Protection against water pressure

In accordance with DIN VDE 0470, DIN EN 60 529, IEC 529  
Source: ZVEI = German Association of the Electrotechnical and Electronic Industry e.V.

## Watertightness of the ODU MINI-SNAP

➔ ODU offers IP 50 and IP 68 connectors in series B and S in the same outside diameter. Because ODU connectors must be compatible with other manufacturers, the company also offers the series K. These connector is larger in diameter than the standard version (series L).

I) In-line receptacle

Sealing Part	
①	O-ring
②	Grommet *2
③	O-ring
④	Potting

II)

Plug

III)

Cable -

Receptacle

Plug

Protection against Water through following seals: \*1

		mated	unmated
I	Cable – Cable termination area	Yes ① + ②	No
II	Device – Cable termination area	Yes ① + ③ + ②	No
III	Device – Cable termination area	Yes ① + ③ + ②	Yes ③ + ④

\*1 Contacts: in mated condition the contacts are protected (in cases I, II, III) . In unmated condition the contacts can be protected using a protective cover (see page 101–103). The cover must be removed before mating the plug with the receptacle.

\*2 The elastic grommet acts as the cable seal. It requires exact knowledge of the cable dimension.  
**Important factors:** Diameter tolerance, roundness, cable design and cable jacket hardness.

## Operating voltage acc. to SAE AS 13441-method 3001.1

The values acc. to SAE AS 13441-method 3001.1 comply with MIL-Std. 1344 – method 3001.

The chart values results are acc. to IEC 60512-2; Test 4. The inserts have been tested in mated condition and the test voltage was applied to the pin insert.

75% of the measured break-down voltage is the basic for the further calculation. 1/3 of this value is the corresponding operating voltage.

All tests were performed at standard environment conditions (room temperature) and can be applied up to an altitude of 2,000 m.

For any deviations one has to consider the reduction factor acc. to the relevant standards.

**Test voltage:** **Break-down voltage x 0.75**

**Operating voltage:** **Break-down voltage x 0.75 x 0.33**

### Caution:

Electrical appliances: for various applications the safety requirements regarding the operating voltage is even more severe!

The relevant data in such cases for the operating voltage are the creepage and clearance distances. For any advise how to chose the proper connector please consult us and indicate the safty standard which your product has to meet.

## Current Load – Contacts

### Nominal Single Contact Current Load for pin / slotted socket

(Nominal Diameter 0.5 mm – 1.6 mm)

➔ **Maximum operating temperature for Standard Contacts: +120 °C**

Test contact was terminated to largest possible conductor.

Connectors or cables with more than one contact or conductor generate a higher heat than a single contact. Therefore, a **Derating Factor** must be applied. For connectors the Derating Factor is applied according to DIN 57 298 Teil 4 / VDE 0298 Teil 2. The Derating Factor is used starting with 5 loaded wires (DIN 41 640 T3).

#### Derating Factor:

Number of loaded wires	Derating Factor
5	0.75
7	0.65
10	0.55
14	0.50
19	0.45
24	0.40

## Termination Styles

Contact blocks (insulation bodies with contacts) are interchangeable between receptacle and plug. As a rule the socket contact blocks are mounted in the part under power.

ODU offers the following contact termination styles:

- **Solder**
- **Crimp**
- **PCB**

## Termination Styles for Turned Contacts

### Solder Termination:

The contacts come mounted by the factory. The insulation body and the pre-assembled contacts are called a contact block.

### Crimp Termination

A single contact is crimped to a single conductor. Subsequently, the crimped contact is pushed into the insulation body. Crimp contacts and insulation bodies are shipped separately.

Crimping creates a reliable, corrosion-free and durable connection between the contact and the conductor.

Crimping causes the crimp barrel of the contact and the conductor material to cold flow. It creates a gas-tight connection between contact and conductor.

The ODU MINI-SNAP generally requires the industry-standard 8-point crimp tool .

Crimp-Clip-Contact for PEEK insulator

### Printed Circuit Board (PCB) Termination:

PCB pins are used only for receptacles which are mounted directly to the PCB. The contacts are permanently installed in the insulation body.

## Conversion AWG - Cross Section

### AWG = American Wire Gauge

The AWG system describes the cross section of a wire using a gauge number for every 26 % increase in conductor cross section. With larger wire diameters, the AWG gauge numbers decrease; as the wire sizes increase, the AWG gauge numbers decrease.

Most wires are made with **stranded conductors**. Compared to solid conductors stranded wires offer higher durability, higher flexibility and better performance under bending and vibration.

Stranded wires are made from wires with smaller gauge sizes (higher AWG gauge number). The AWG gauge number of the stranded wire is equal to that of a solid conductor of the same size wire. The cross section of the stranded conductor is the sum of cross sections of the single conductors.

For example, a AWG-20 stranded wire of 7 AWG-28 conductors has a cross section of 0.563 mm<sup>2</sup>; an AWG-20 stranded wire with 19 AWG-32 conductors has a cross section of 0.616 mm<sup>2</sup>.

Conversion Table AWG / mm<sup>2</sup>

Circular Conductor			
AWG	Diameter		Cross Section mm <sup>2</sup>

## Housing Materials and Surface Finish

MINI-SNAP housings are made from brass and are nickel-plated with a matt-chromate surface finish (sand-blasted). Nickel-plated or black chromate-finished housings are available on special request.

Inside metal components are made from nickel-plated brass.

Component Parts	Material	Surface
	Designation	Thickness of the film
Housing Back Nut Slotted Nut	➔ Cu-alloy	+ 1 µm Cu + 3–6 µm Ni + 0.3–1 µm matt chromate
Collet EMI-Ring Half-Shells Locking Washer Nut Retainer Ring	➔ Cu-alloy	➔ Ni matt: 6–8 µm
Pin (solder or PCB) Socket (solder or PCB) Pin (crimp) Socket (crimp)	➔ Cu-alloy	+ 1.25 µm Ni ➔ + 0.75 µm Au

## Insulation Body Material ( recognized)

<b>Creeping distance acc. to CTI</b>	IEC 60112			275	600	175

<sup>1)</sup> PTFE (Teflon) is only used for Coax- and Triax Connectors

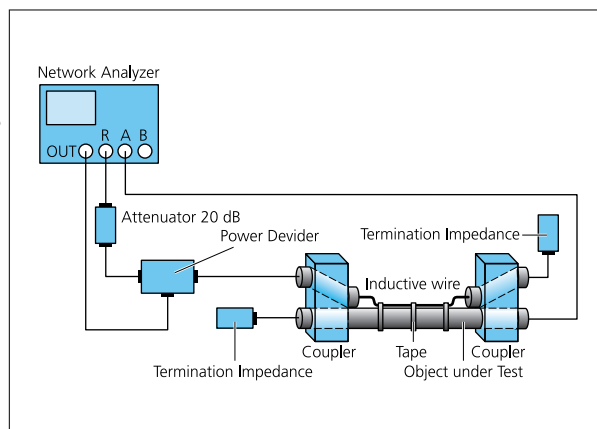

## Electromagnetic Compatibility (EMC)

When discussing electromagnetic compatibility (EMC) one should not only consider the device or the circuit, but also include the network and the entire data communication link. This involves all connecting elements such as conductors and connectors. Electromagnetic interference from the outside into the connector can lead to system malfunctioning. The best way to prevent this is by providing a high-quality shield between the cable and the connector. In order to provide reliable EMC data to our customers we engaged the services of a certified test laboratory to investigate the EMC characteristics of the ODU MINI-SNAP. They tested for us Size 00, 0, 1, 2 and 3 MINI-SNAP connectors.

Measurements were conducted using the inductive wire or parallel wire method in accordance with test procedure VG 55214-6-2. In this set-up, the mated connector is connected on one end to a network analyzer and terminated on the other end with a suitable impedance. The inductive wire is then mounted in close proximity along the mated connector pair. The induction wire is a ribbon cable which permits to vary the level of induction by using more or less of the ribbon conductors.

Next, a signal with a frequency range of 10 kHz to 3 GHz is connected to the ribbon cable. The network analyzer is used to measure the amount of signal induced into the connector circuit. The result is shown as the shielding attenuation  $A_T$  in dB. It is essential that all leads to the connector are shielded so that no signal can be induced into the circuit at any other place except the connector. The various attenuation values are plotted on a logarithmic scale as attenuation in dB vs. frequency.

An attenuation of better than -55 dB is generally required for reliable connector and system operation. It can be shown that our connectors will meet this requirement in all applications.

The following diagram is valid for all series and standard sizes.

## Autoclaving of ODU MINI-SNAP Connectors

If required ODU can deliver MINI-SNAP connectors for the following sterilization process: Steam-sterilization with pre-vacuum or gravitation-process. Connectors were tested with autoklave equipment with reference to DIN EN 13 060 at 134° C and 500 cycles.

### Sterilization Curve:

For other sterilization-processes please contact our technical support team.

In the scope of quality approval the sizes 0 and 3 have been submitted to environmental and mechanical tests acc. to MIL.

All tests have been passed.

**Tests carried out:**

<b>Definition</b>	<b>Nach Norm</b>
High Temperature	MIL-STD 810 F / PV 501
Low Temperature	MIL-STD 810 F / PV 502
Temperature Shock	MIL-STD 810 F / PV 503
Humidity	MIL-STD 810 F / PV 507
Salt Fog	MIL-STD 810 F / PV 509 and MIL-STD 1344 A / Methode 1001.1
Shock	MIL-STD 810 F / PV 516
Vibration	MIL-STD 1344 A / Methode 2005.1 / IV
Water Thightness IP 68	IEC 60529

## Technical Terms and Definitions

### **Air Gap**

= Shortest distance between two conductive elements through the air.

### **Autoclavability**

(See page 130)

### **AWG**

(See page 127)

### **Creepage Distance**

= The distance measured across the surface of a dielectric between two contacts or a contact and a metal part. The longer the distance, the lesser the risk of damage or tracking. Minimum creepage distances are specified according to the operating voltage and the applicable isolation group.

### **Crimp Area**

= The part of a crimp barrel at which the crimp connection is achieved by pressure deformation or by reshaping the barrel around the conductor.

### **Crimp Barrel**

A hollow part of a contact which accepts one or more conductors and which may be crimped through the application of a crimping tool.

### **Crimp Connection**

= The permanent attachment of a contact to a conductor by pressure deformation or by reshaping the crimp barrel around the conductor so that a good electrical and mechanical connection is established.

(See page 126)

### **Connector**

= A component which terminates conductors for the purpose of providing connection and disconnection to a suitable mating component. Depending on the fastening to a cabinet, panel, rack etc. or a cable, they are classification.

### **Delivery**

Delivery of the connectors usually as components (that means not assembled).

Exception: Solder contacts are factory-installed in the insulation body.

### **Fixed Connector**

= A connector for attachment to a rigid surface (panel).

### **Free Connector**

= A connector for attachment to the free end of a wire or cable. Also called free hanging connector or inline receptacle.

### **Insertion Or Withdrawal Force**

= The force required to fully mate or unmate a set of connectors without the effect of coupling, locking or similar devices. The insertion force is usually greater than the withdrawal force. Also called mating and unmating force.

### **Insulation Body**

= Non-conductive part of a connector, to electrically and mechanically separate live parts and to protect against accidental touch.

### **Insulation Group**

= Classification of connectors according to the operating and working conditions (insulation groups according DIN VDE 0110).

**Keying**

= System of projections and grooves on mating connectors which prevent otherwise identical connectors from being mated. This is useful when several connectors of the same style are used in the same application (see page 30, 50, 66).

**Lower Limit Temperature**

= The lowest permissible temperature which a connector or a plug-in device is allowed to be operated.

**Materials**

The contacts are made of Cu-alloy and gold-plated. The standard housings are made of Cu-alloy with a matt-chromate surface finish. All other materials and surfaces on special request. (see page 128).

**Mating Cycles**

= Mechanical operation of connectors and plug-in devices by insertion and withdrawal. One mating cycle comprises one insertion and one withdrawal operation.

**Nominal Single Contact Current Load**

= Current load, which can load every single contact (see page 125).

**Nominal Voltage**

Nominal voltage characterizes a component.

**Operating Temperature of the ODU MINI-SNAP**

= Range between upper and lower temperature limits.  
-40°C to +120°C (see page 8)

**Print Connection**

(see page 126)

**Printed Circuit Board**

Boards, typically made of epoxy-filled glass fiber fabric, with conductive pattern on one or both sides, or in case of multilayer boards, also imbedded inside the board. They feature metallized holes for soldering wire-mounted components or for the insertion of resilient or rigid press-in pins or instead, pads for attaching components using surface mount technology (SMT).

**Reference Current**

= The current at which a connector can be operated permanently simultaneously through all contacts without reaching maximum temperature.

**Reference Voltage**

Normal voltage (VDE 0110) for a connector.

**Solder Termination**

(see page 126 Termination Styles)

**Termination techniques**

= Methods for connecting a wire to an electro-mechanical component, e.g. solderless connection according to IEC 60352: respectively such as crimp, press-in etc. or solder connections.

**Test Voltage**

= The voltage the connectors are tested, and are being referred on definite characteristics.

**Upper Limit Temperature**

= highest permissible temperature at which a connector or a plug-in device is allowed to operate. This temperature includes the self-heating and the ambient temperature. At ODU MINI-SNAP + 120 °C (see page 125).

**Watertightness**

(See page 123)

**Wire**

= Wires may be provided with an insulation cover, an electrical shielding. Cables or conductors may consist of one or more wires.

Connectors shown in this catalog are designed to operate at high voltages and high frequencies. Care must be taken to assure that no person can come in contact with live conductors during installation or operation of the connectors.

ODU reserves the right to change design and performance of any product to meet changing technical developments without prior notice. ODU reserves the right to discontinue any part in this catalog without prior notice and without obligation to continue production after the change.

## More Push-Pull Series from ODU

### ODU MINI-SNAP Series S

Cylindrical Connector made out of metal with push-pull locking – FP locking principle using conical sleeve, Keying with insulator.

### ODU MINI-SNAP Series F

Cylindrical Connector made out of metal with push-pull locking – FP locking principle using conical sleeve, Keying with half-shells.

### ODU MINI-SNAP PC

Cylindrical Connector made out of plastic with push-pull locking – FP locking principle using conical sleeve, Keying with half-shells.

### ODU MEDI-SNAP

Cylindrical Connector made out of plastic with push-pull locking – especially for the medical industry.
